Mise à niveau du IOS dans Packet Tracer

1) Connecter un routeur 2901 à un serveur.

2) Attribuer des adresses IP dans le même LAN.

Périphérique	Interface	Adresse IP	Masque
Routeur	g0/0	10.0.0.1	255.255.255.0
Serveur	fa0	10.0.0.2	255.255.255.0

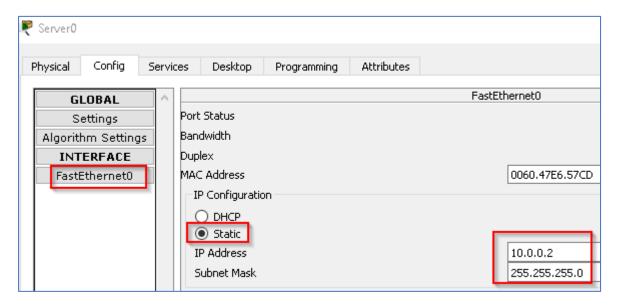

Routeur

```
Router > enable Router # conf t Router (config) # int g0/0 Router (config-if) # ip address 10.0.0.1 255.255.255.0 Router (config-if) # no shut Router (config-if) # end Router #
```

Sauvegarder la configuration :

```
Router#wr
Building configuration...
[OK]
```

Serveur

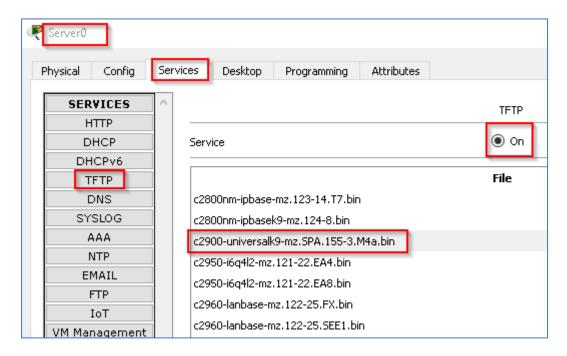

3) Faire un test de connectivité

```
Router#ping 10.0.0.2

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 10.0.0.2, timeout is 2 seconds:
!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 0/0/1 ms
```

4) A partir du serveur, aller dans Services, TFTP et notez le nom de l'image IOS :

5) A partir du routeur, copier l'image sur le flash:

Router#copy tftp: flash:		
Address or name of remote host []? 10.0.0.2		
Source filename []? c2900-universalk9-mz.SPA.155-3.M4a.bin		
Destination filename [c2900-universalk9-mz.SPA.155-3.M4a.bin]?		
Accessing tftp://10.0.0.2/c2900-universalk9-mz.SPA.155-3.M4a.bin		
Loading c2900-universalk9-mz.SPA.155-3.M4a.bin from 10.0.0.2:		
!!!!!!!!		
[OK - 33591768 bytes]		
33591768 bytes copied in 0.566 secs (6231443 bytes/sec)		

6) Valider la copie :

```
Router#dir

Directory of flash0:/

3 -rw- 33591768 <no date> c2900-universalk9-mz.SPA.151-4.M4.bin
4 -rw- 33591768 <no date> c2900-universalk9-mz.SPA.155-3.M4a.bin
2 -rw- 28282 <no date> sigdef-category.xml
1 -rw- 227537 <no date> sigdef-default.xml

255744000 bytes total (188304645 bytes free)
```

7) Configurer le routeur pour booter à partir de la nouvelle image:

```
Router(config) #boot system c2900-universalk9-mz.SPA.155-3.M4a.bin

Router(config) #end
```

Sauvegarder la configuration :

```
Router#wr
Building configuration...
[OK]
```

Rebooter le router :

```
Router#reload
Proceed with reload? [confirm]
```

8) Vérifier la version de l'IOS:

Router#<mark>show version</mark>

Cisco IOS Software, C2900 Software (C2900-UNIVERSALK9-M), Version 15.5(3)M4a, RELEASE SOFTWARE (fc1) Technical Support: http://www.cisco.com/techsupport Copyright (c) 1986-2016 by Cisco Systems, Inc. Compiled Thu 06-Oct-16 14:43 by mnguyen

Router#enable

Router#conf t

Router(config) #enable ?

algorithm-type Algorithm to use for hashing the plaintext 'enable' secret
password Assign the privileged level password
secret Assign the privileged level secret
Router(config) #enable
